There’s a revolutionary way to get noticeable whitening results in minimal time.

Philips Zoom QuickPro whitening varnish:
• Breakthrough two-layer technology seals in hydrogen peroxide
• Whitens four shades* — with just a five-minute application
• Virtually no sensitivity

Once you’re done, send your patients on their way and instruct them to simply brush or wipe off the varnish in 30 minutes.

Professional whitening has never been so quick... or so effortless.

Philips Zoom Is Designed for Today’s Busy Patients

Philips Zoom products give dental care providers innovative new options for fast, effective whitening. Philips Zoom WhiteSpeed, an in-office whitening system, supports deep whitening without discomfort, while Philips Zoom DayWhite and NiteWhite provide take-home convenience and efficacy. For touch-ups on the go, the Philips Zoom whitening pen keeps teeth looking their best between treatments.

Perhaps the most exciting product in the lineup for dental hygienists is Philips Zoom QuickPro whitening varnish, which makes in-office whitening faster and easier than ever. Philips Zoom QuickPro offers professional efficacy with unprecedented convenience.

Philips Zoom QuickPro Whitening Varnish: A New Way to Whiten

All patients want great results — but they don’t want to wait for them. Thanks to an innovation in application methods, Philips Zoom QuickPro can whiten teeth up to four shades with only five minutes of application time in the chair1 — and it is highly affordable, meaning you can offer the benefits of whitening to a much wider range of patients.

The secret is QuickPro’s patient-pending, two-layer technology. First, the 20 percent hydrogen peroxide gel, which is colorless and invisible, is applied to the teeth. After application of the second varnish layer, you dismiss the patient with instructions to brush the varnish off in 30 minutes.

Because QuickPro is professionally applied and sealed directly on the teeth, your patients get the consistent, high-quality results they want — all with virtually no sensitivity. Best of all, QuickPro can be added to most prophylaxis sessions without putting a cramp in your appointment schedule.

According to a study of 88 subjects published in the Journal of Dental Research,2 Philips Zoom QuickPro whitening varnish bleaching agents in both 14 and 20 percent concentrations achieved noticeably whiter teeth, provided a positive patient experience and were safe to use. The whitening results of each agent are shown in the graph, measured on both the VITA Bleachedguide 3D-Master and the VITA Classical Shade Guide.

Conclusion

Philips Zoom QuickPro can assist you in formulating a patient-centered treatment plan that includes the coordination of resources, contemporary and innovative technology and time management as specified in the Standards.

With Philips Zoom, you can recommend a customized treatment program designed for individual patients — one that respects their time and budget and makes it easy for them to say “yes” to whitening. With Philips Zoom, you can help more of your patients achieve and maintain a healthy, confident smile.
